DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Goyal et al. ("Goyal", US 5,873,108).

As per claims 1-4 and 6, Goyal teaches a system for managing and displaying a scalable list of items comprising: a small footprint device, a client program to instantiate a list container object and to add list item data objects thereto, wherein a plurality of list item renderer objects executable to display corresponding list item data objects, and a plurality of objects of the list item renderer object class are instantiated by the list container object, wherein the list item renderer object class implements a "set data" method to set the list item data object corresponding to a list item renderer object and wherein the list container object passes the corresponding list item data objects to the "set

Art Unit: 2174

data” method for each list item renderer object, and wherein each of the plurality of list item renderer objects displays the corresponding list item data object in a displayed list row corresponding to the list item renderer object (fig. 3; col. 2, line 24 et seq.).

As per claim 5, Goyal teaches the list container object to maintain a start index specifying the first list item data object currently being displayed, wherein in response to user interaction, the list container object updates the start index and specifies an updated list item data object corresponding to each of the plurality of list item renderer objects for display (fig. 3; col. 7, lines 38-41; *inherently, the list container object must update the pointer index to the first list item data object shown on the display when a scrolling operation takes place in order to manage the display of list item data objects properly*).

Claims 7-12 are similar in scope to claims 1-6 respectively, and are therefore rejected under similar rationale.

Claims 13-18 are similar in scope to claims 1-6 respectively, and are therefore rejected under similar rationale.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
